

NICOLA CASARIN

Hello! I'm Nicola, a young man in his late twenties hailing from Italy. I have a background in contemporary history from university and hold a diploma in environmental chemistry from high school. I have an insatiable curiosity for learning and continuously push myself beyond my limits.

During a one-year master's program in data analytics, I discovered the fascinating realm of statistical analysis across various fields. However, I decided to leave the program as it deviated from its original analytics focus. Technology has always been a passion of mine, and I constantly strive to integrate it with my other interests. I'm comfortable with any operating system, proficient in R programming, and have a basic understanding of other programming languages.

My driving force is the desire to explore the unknown, always opting for unfamiliar paths in both life and work rather than sticking to routine. While I embrace the future and its surprises, I also value the importance of cherishing past experiences.

Currently, I apply my passions and technological expertise in my role as a Digital HR professional, where I leverage technology to simplify and expedite human resources operations. While I may not have a clear vision of my future aspirations, I am confident that the future holds exciting surprises.

WORK EXPERIENCE
